

Ryan Tran

Atlanta, GA | 678-670-9868 | concepting@protonmail.com | linkedin.com/in/RyanTren/ | github.com/RyanTren

SKILLS

Languages: Python, C#, Java, TypeScript, JavaScript, SQL

Frameworks: .NET, ASP.NET Core, React, Next.js, Angular, FastAPI, Node.js, Streamlit

Cloud & Tools: Azure, Azure Blob Storage, Kubernetes, Docker, Azure DevOps, Git, Redis, PostgreSQL, Postman

EXPERIENCE

Software Development Intern

Jun. 2026 – Aug. 2026

Milliman (Financial Risk Management Practice)

Chicago, IL

- Developed end-to-end file upload and bulk download functionality for distributed compute jobs, integrating **Azure Blob Storage** with backend REST APIs and frontend workflows to streamline job data management.
- Migrated logging infrastructure from **NLog** to **Serilog** across **4** microservices, implementing rolling log policies that reduced VM disk usage and improved operational reliability.
- Implemented **OAuth 2.0** and **OpenID Connect** authentication flows to secure APIs, distributed services, and user-facing applications.
- Assisted in refactoring a modular Python/Streamlit research platform that automated article discovery, source verification, relevance scoring, and data aggregation using REST/RSS APIs, web scraping, and SQLite.

Software Engineer Co-op

May 2025 – May 2026

INPO (Institute of Nuclear Power Operations)

Atlanta, GA

- Delivered **35+** full-stack features and bug fixes for mission-critical nuclear applications, improving internal workflows and system reliability using C#, .NET, Angular, TypeScript, and SQL Server.
- Modernized **2** enterprise applications by migrating from **Angular 13** → **20 LTS** and **.NET Core 6** → **10 LTS**, while improving **CI/CD** build and deployment pipelines, resolving dependency conflicts, remediating security vulnerabilities, and replacing deprecated component libraries to stabilize production systems.
- Expanded automated test coverage by **45%+** by developing E2E, regression, and API test suites with **Ranorex**, **Postman**, and **Swagger**, proactively identifying critical defects pre-release and reducing manual QA effort across **3** applications in **Azure DevOps**.
- Resolved high-priority production defects and delivered hotfixes during release windows, collaborating across development and QA teams to maintain application reliability and meet deployment deadlines

Software Engineer Intern

Sep. 2024 – Dec. 2024

Aayats (Techstars FW'24)

Atlanta, GA

- Architected and optimized an audio analysis **ML pipeline** to predict musical attributes from MP3 files using **Librosa**, integrating outputs with an **Airtable-backed data system**.
- Presented feature extraction pipeline generating **15+** spectral and temporal audio features, enabling high-quality dataset creation for model training and evaluation.
- Accelerated model experimentation by streamlining fine-tuning workflows with **Hugging Face Transformers** and **Unsloth**, improving iteration speed and customization of pretrained models.

PROJECTS

Retrieval-Augmented Generation (RAG) Chatbot for Learning Syntax

Jun. 2026 – Present

- Created a **Retrieval-Augmented Generation (RAG)** chatbot by separating retrieval logic into a reusable LangChain pipeline & exposing it through FastAPI REST APIs and a Streamlit UI.
- Built a **FAISS vector database** with **Hugging Face embeddings** for semantic document retrieval, reducing hallucinations by grounding LLM responses in indexed PDF knowledge.
- Implemented **production-oriented API features** including API-key authentication, CORS, security headers, request validation, rate limiting, and persistent vector index loading for efficient integration with React/.NET applications.

EDUCATION

Kennesaw State University

Marietta, GA

Bachelor of Science in Computer Science

Graduated Magna Cum Laude May 2026
